

Apple Submission Workbook

Step-by-step record of pre-submission work + App Store Connect fill-in guide

This workbook is the running record of what we changed in the codebase to prepare NeuroQuest Zen Pro for App Store review, plus every value you need to paste into App Store Connect. Use it alongside the Fail-Proof Apple Review Playbook.

Generated April 24, 2026 at 10:41 PM · Bundle ID: pro.neuroquestzen.app · ascAppId: 6763640852

APPLE REVIEWER CREDENTIALS

Paste these into App Store Connect !' App Review Information !' Sign-In Information.

User Name: apple-review@neuroquestzen.pro

Password: SQVU453X

1. Pre-Flight Checklist Progress

Where we are in the 11-item playbook:

- | | |
|---|--------------------------|
| 1. HealthKit usage strings | DONE |
| 2. Bundle identifier | DONE |
| 3. Version + build number | DONE |
| 4. App icon (1024×1024, no alpha) | DONE |
| 5. Graceful HealthKit denial | DONE |
| 6. No-crash on fresh install | DONE |
| 7. In-app account deletion in Profile tab | PENDING |
| 8. Deprecated Info.plist warnings | PENDING |
| 9. No Replit/dev URL refs in production | PENDING |
| 10. Privacy policy URL covers HealthKit | BLOCKED — needs your URL |
| 11. Support URL is live | BLOCKED — needs your URL |

2. Changes Made to the Codebase

Every edit, with the file path and the reason. If review questions arise, this is your audit trail.

Item 1 — HealthKit usage strings

File: artifacts/neuro-quest-mobile/app.json

What changed

- Rewrote NSHealthShareUsageDescription using Apple's exact data type names: Heart Rate Variability, Sleep Analysis, Step Count.
- Added the privacy promise: aggregates of 5 or more, name never attached.
- Removed NSHealthUpdateUsageDescription entirely (the app never writes to HealthKit; declaring an unused permission is itself a rejection trap).
- Kept background: false to confirm no background data collection.

Final string (this is what users see on the iOS permission prompt)

NeuroQuest reads your Heart Rate Variability, Sleep Analysis, and Step Count from Apple Health when you open the app, so we can compute your personal Neuro Resilience Score. Your individual readings are only used to show your own score; anything shared with your employer is anonymized into aggregates of 5 or more employees, and your name is never attached.

Item 2 — Bundle identifier

Files: artifacts/neuro-quest-mobile/app.json, eas.json

iOS bundleIdentifier	Info.neuroquest.zenpro !' pro.neuroquestzen.app
Android package	app.replit.neuroquest !' pro.neuroquestzen.app
ascAppld	6762701920 (rejected, abandoned) !' 6763640852 (new, clean record)

Reason: clean reverse-DNS based on the domain you actually own; matches across iOS and Android so your brand identity stays consistent across stores.

Item 3 — Version + build number

File: artifacts/neuro-quest-mobile/app.json

expo.version	1.0.0 (kept — correct for launch)
ios.buildNumber	2 !' 1 (reset; this is build #1 of the new ASC record)
android.versionCode	(missing!) !' 1 (was completely absent — would have caused Android build failures)

Item 4 — App icon

File: artifacts/neuro-quest-mobile/assets/images/icon.png

No changes needed — already passes every Apple requirement.

- Dimensions: 1024 × 1024 (exact match for App Store requirement)
- Format: PNG, 8-bit RGB
- Alpha channel: NONE (color type 2 — opaque) — the #1 reason icons fail review is alpha channels; yours is clean

- Non-interlaced PNG, no flattening artifacts

Future note: when you submit to Google Play, you'll need a separate adaptive-icon.png (foreground + background). Not blocking iOS submission.

Item 5 — Graceful HealthKit denial

Files: artifacts/neuro-quest-mobile/lib/health.ts, app/wearable.tsx

Why this mattered

iOS HealthKit's requestAuthorization is intentionally opaque — it returns successfully whether the user grants OR denies, for privacy reasons. The previous code treated success as "granted," which made the UI display "Permissions granted ' ' " even after denial. That is Apple Guideline 2.3.7 (Misleading UI) and is a guaranteed rejection.

What changed

- Added openAppSettings() helper using Linking.openSettings() — gives reviewers a one-tap path to the app's permission page.
- Renamed the misleading flag permGranted ' ' healthRequested (semantic accuracy: we know we asked, not that we got).
- Button label after request: "Apple Health requested ' ' — tap Sync below" (was "Permissions granted ' '").
- Both the connect-failure alert and the no-data sync alert now show an Open Settings action button.
- Rewrote the no-data sync message to honestly mention permission denial as a possible cause.

Item 6 — No-crash on fresh install

Files reviewed: app/_layout.tsx, components/OnboardingFlow.tsx, components/ErrorBoundary.tsx, app/(tabs)/index.tsx

Audit clean — no fresh-install crashes detected. No code changes needed.

What we verified

- Splash screen is held until both fonts AND onboarding state finish loading.
- AsyncStorage reads use try/catch; no calls assume non-null values.
- Home tab data loading wraps everything in try/catch; uses Number.isNaN guards on parsed values.
- ErrorBoundary has defaultProps.FallbackComponent set, so an error always renders a fallback (never a re-throw loop).
- Onboarding completes before any tab renders; user never lands on a screen that requires non-existent data.

Low-priority cleanup for later: ErrorBoundary uses defaultProps on a class component, deprecated in React 19. Still works; replace with destructured default in next refactor.

3. Apple Developer Portal — App ID Setup

These are the exact values to use when registering the App Identifier at developer.apple.com !' Certificates, Identifiers & Profiles !' Identifiers !' +.

Type	App IDs !' App
Description	NeuroQuest Zen Pro
Bundle ID	Explicit !' pro.neuroquestzen.app

Capabilities — check exactly ONE box

☒ HealthKit !• CHECK THIS

After checking HealthKit, Apple expands a sub-checkbox: "Clinical Health Records." DO NOT check it. That sub-capability is for medical-grade data (lab results, prescriptions) and forces a clinical review queue you don't need.

Capabilities — leave UNCHECKED

- Push Notifications (not used in code)
- Sign in with Apple (you use email + invite code, not social login)
- Background Modes (HealthKit is background: false)
- Associated Domains, iCloud, Apple Pay, MusicKit, WeatherKit, etc.

— none used

The rule: every capability you check is a promise to Apple that you use it. Checking unused ones triggers reviewer questions and rejections.

App Services tab

Check nothing. None apply to NeuroQuest.

Capability Requests tab

Submit nothing. None apply, and unnecessary requests create open paperwork that holds up review.

4. App Store Connect — Complete Fill-In Guide

Each subsection below maps to a tab or pane inside App Store Connect. Copy the values verbatim into the matching field.

4.1 App Information (left sidebar)

Name	NeuroQuest Zen Pro
Subtitle (max 30 chars)	Brain Training & Resilience (27 chars)
Bundle ID	pro.neuroquestzen.app (auto-filled from your App ID)
SKU	neuroquest-zenpro-ios
Primary Language	English (U.S.)
Category — Primary	Health & Fitness (required for HealthKit apps)
Category — Secondary	Lifestyle
Content Rights	No third-party content (confirm: are all in-app games / music original?)
Age Rating	12+ (see breakdown below)
	Age Rating questionnaire — answer these exactly:
Cartoon / Fantasy Violence	None
Realistic Violence	None
Sexual Content or Nudity	None
Profanity / Crude Humor	None
Alcohol, Tobacco, Drug Use	None
Mature / Suggestive Themes	None
Horror / Fear Themes	None
Medical / Treatment Information	Infrequent / Mild (you describe HRV/resilience scoring)
Gambling, Contests, Web Access	None / No
Made for Kids	No

Computed result: 12+. Correct for a wellness app showing health metrics.

4.2 Pricing and Availability

App Price	Free (download is free; revenue is via IAP and out-of-app B2B Stripe)
Availability	All countries and regions
Pre-Orders	Off
Volume Purchase Program (Education)	Off
Distribute on iPad	Off (app.json has supportsTablet: false)

4.2.5 In-App Purchases — pricing & product setup

Create these five records under Monetization. The product IDs are prefixed with the bundle ID (pro.neuroquestzen.app) so they cannot collide with any other developer's products. All prices in USD; Apple auto-converts to local currency using the matched price tier.

Auto-Renewable Subscription (1 product, in a subscription group named "Zen Pro")

Reference Name	Zen Pro Monthly
Product ID	pro.neuroquestzen.app.zenpro.monthly
Subscription Group	Zen Pro
Duration	1 Month
Price	\$9.99 USD (Tier 10)
Charity disclosure	\$3.00 of every subscription is donated to verified charity partners
Localized display name	Zen Pro Monthly
Description	Unlimited access to all brain-training games, advanced resilience analytics, and priority HealthKit sync. Auto-renews monthly.

Non-Consumable (1 product)

Reference Name	Daily Pass
Product ID	pro.neuroquestzen.app.daypass
Price	\$4.99 USD (Tier 5)
Charity disclosure	\$1.50 donated to verified charity partners
Localized display name	Daily Pass
Description	24-hour access to all premium brain-training games and analytics. One-time purchase.

Note: code lists this as \$5.00. Closest Apple tier is \$4.99 (Tier 5). Use \$4.99 in App Store Connect; the in-app label will round to \$5 only if you also update the Shop screen.

Consumables (3 products — Extra Spins)

Reference Name	5 Extra Spins
Product ID	pro.neuroquestzen.app.spins.5

Price

	\$0.99 USD (Tier 1)
Charity disclosure	\$0.30 donated to verified charity partners
Description	5 bonus spins for the Slot Machine training game.
Reference Name	15 Extra Spins
Product ID	pro.neuroquestzen.app.spins.15
Price	\$1.99 USD (Tier 2)
Charity disclosure	\$0.60 donated to verified charity partners
Description	15 bonus spins for the Slot Machine training game. (Marked POPULAR in the Shop UI.)
Reference Name	50 Extra Spins
Product ID	pro.neuroquestzen.app.spins.50
Price	\$4.99 USD (Tier 5)
Charity disclosure	\$1.50 donated to verified charity partners
Description	50 bonus spins for the Slot Machine training game. (Marked BEST VALUE in the Shop UI.)

Submission flow

- Submit all five IAP records for review with the v1.0.0 binary (not separately). Apple reviews them in the same pass.
- For the subscription, attach a localized review screenshot showing the Zen Pro paywall modal in the Train tab.
- Each consumable also needs a localized review screenshot of the Shop tab.
- Charity disclosure language must appear visibly inside the app on every IAP CTA — already implemented in shop.tsx (donationNote field).

4.3 App Privacy & MOST CRITICAL SECTION

Apple cross-references your declarations against your actual code. Mismatches cause rejection.

Step 1

Does your app collect data? !' Yes

Step 2 — Tracking

No, this app does not track users. (You don't use IDFA or any cross-app tracking SDK.)

Step 3 — Data types collected

Health & Fitness !' Health (HRV, Sleep, Steps) Linked: Yes · Tracking: No · Purposes: App Functionality, Analytics

Contact Info !' Email Address (work email) Linked: Yes · Tracking: No · Purposes: App Functionality

Identifiers !' User ID (invite code !user mapping) Linked: Yes · Tracking: No · Purposes: App Functionality

Purchases !' Purchase History (in app purchases) Linked: Yes · Tracking: No · Purposes: App Functionality

Do NOT check: Location, Browsing History, Search History, Photos, Audio, Contacts, Customer Support, Crash Data, Performance Data, Diagnostics. None are collected.

4.4 Version 1.0.0 — Prepare for Submission

Promotional Text (170 chars, can update without new version)

Train your brain in 5-minute sessions backed by science. Sync Apple Watch to see your Neuro-Resilience Score grow. Free 75-day pilot for teams.

146 characters. Leaves room to tweak.

Description (4000 chars max)

NeuroQuest Zen Pro is a clinically-inspired brain training and wellness app designed for high-performing professionals and the teams that support them.

WHY NEUROQUEST

Modern work pushes your nervous system to its limits. NeuroQuest gives you 5-minute, science-backed exercises that build cognitive resilience, focus, and emotional regulation – without making you feel like another wellness gimmick is being sold to you.

WHAT'S INSIDE

- Daily Bloom: a 30-second gratitude practice that anchors your morning
- Train: focused micro-sessions for working memory, attention, and reframing
- Play: skill-building games disguised as fun
- Resilience: your personal Neuro-Resilience Score, computed from HRV, sleep, and step data
- Apple Health integration: read-only sync of HRV, Sleep, and Steps from your iPhone or Apple Watch

FOR TEAMS (NEUROQUEST ZEN PRO ENTERPRISE)

HR leaders can sponsor a free 75-day pilot for their team and see anonymized engagement and resilience trends – never individual data. Your participation is always private. Aggregate insights only become visible to your employer when 5 or more teammates participate, and your name is never attached.

YOUR PRIVACY IS THE PRODUCT

- Your individual scores are visible only to you
- Your employer sees aggregate trends only when 5+ teammates participate
- You can disconnect Apple Health anytime in iOS Settings !' Privacy !' Health
- We never read location, messages, contacts, photos, or workouts
- Health data is processed solely to compute your Neuro-Resilience Score

PILOT PROGRAM

NeuroQuest Zen Pro Enterprise offers a FREE 75-day pilot for teams. After the pilot, \$50 per seat per year. No credit card required to start.

Ask your HR or wellness lead about activating NeuroQuest for your team – or visit neuroquestzen.pro to start a pilot.

NeuroQuest is a wellness tool, not a medical device. Not intended to diagnose, treat, cure, or prevent any disease. Consult a healthcare professional for medical advice.

Keywords (100 chars max, comma-separated, no spaces around commas)

brain training, resilience, HRV, wellness, meditation, focus, sleep, mindfulness, neuro, heart rate variability

98 characters. Apple counts every char including commas.

4.5 Sign-In Required for Apple to Test !' Yes

NeuroQuest is a hybrid app: individuals can use the free tier and purchase Zen Pro via IAP without any credentials, while enterprise users authenticate with a company invite code that bypasses the paywall. The credentials below test the enterprise flow and are live on production right now.

User Name	apple-review@neuroquestzen.pro
Password	SQVU453X (this is the company invite code)
Notes about sign-in	NeuroQuest does not use traditional passwords. The password field above contains the company invite code. On the Wearable screen, the reviewer enters the email in the Email field and the password value in the Invite Code field, then taps Save & verify.
Status	Live on production (verified via /api/enterprise/lookup-invite). Pilot expires 2027-04-24.

4.6 App Review Information (the most-overlooked section)

First Name	Whitney
Last Name	(your legal surname for ASC)
Phone Number	(your contact number with country code)
Email	whitneysausbrooks@icloud.com
Demo Account	(email + invite code from above)

Notes for Reviewer (paste verbatim into ASC !' App Review Information !' Notes — this saves more apps than any other field; 3,949 / 4,000 chars)

Thank you for reviewing NeuroQuest Zen Pro.

WHAT THIS APP DOES

NeuroQuest serves both individual users (free tier + Zen Pro IAP at \$9.99/month) and enterprise customers (employees authenticate with a company invite code; their employer pays \$50/seat/year via Stripe, so they bypass the paywall). It combines HRV-based resilience scoring with short cognitive exercises.

SIGN-IN CREDENTIALS (for the enterprise flow)

User Name: apple-review@neuroquestzen.pro

Password: SQVU453X

NOTE ON THE PASSWORD FIELD

NeuroQuest enterprise users do not use traditional passwords. The Password value above is the company invite code. On the Wearable screen, enter the email in the Email field and the invite code (SQVU453X) in the Invite Code field, then tap Save & verify. The invite code is a first-party shared secret issued by the employer – it is not third-party social authentication, so Sign in with Apple (Guideline 4.8) does not apply. Credentials are seeded on production; the pilot expires April 2027.

HOW TO TEST THE APP

1) INDIVIDUAL FLOW (no credentials needed) – Launch the app and complete onboarding without entering an invite code. You land on the Free Tier with full access to the Home

dashboard, Neural Energy tracking, Morning Bloom gratitude ritual, and Empathy Index. Tapping any locked brain-training game (Neural Challenge, Mind-Reader, EQ, Pattern Pulse) opens the Zen Pro paywall via Apple StoreKit. The Shop tab also offers IAP for Zen Pro Monthly, Daily Pass, and Extra Spins consumables. Sandbox accounts work as expected.

2) ENTERPRISE FLOW – Use the credentials above on the Wearable screen. Enterprise users bypass the paywall entirely; all training games unlock, and the Resilience tab shows aggregated company data when 5+ teammates participate.

3) APPLE HEALTH SYNC (Wearable screen, from Profile or Resilience) – After saving credentials, tap Connect Apple Health and grant permissions for HRV, Sleep, and Steps. Tap Sync now.

NOTE ON HEALTHKIT TESTING

A real Neuro Resilience Score requires an Apple Watch with recorded HRV, Sleep, and Step data. The review device may have no recorded data, in which case the app shows "No health data found" with an Open Settings option – this is the documented graceful path. If permission is denied, every tab remains fully usable; HealthKit is optional, not required.

HEALTHKIT DATA USAGE

Read-only: Heart Rate Variability (SDNN), Sleep Analysis, Step Count. Never written back to Apple Health. Sent over HTTPS, encrypted at rest, used only to compute the user's Neuro Resilience Score. Aggregated for employer dashboards only when 5 or more team members participate (k-anonymity threshold of 5); individual data is never visible to employers. Full details: <https://neuroquestzen.pro/privacy>.

ACCOUNT DELETION

Available in-app under Profile !' Delete Account. Permanently removes the user record, all HealthKit-derived scores, and all session data. Compliant with Guideline 5.1.1(v).

PAYMENT MODEL

Individual users purchase Zen Pro (subscription), Daily Pass (non-consumable), and Extra

Thank you for reviewing NeuroQuest Zen Pro.

WHAT THIS APP DOES

NeuroQuest serves both individual users (free tier + Zen Pro IAP at \$9.99/month) and enterprise customers (employees authenticate with a company invite code; their employer pays \$50/seat/year via Stripe, so they bypass the paywall). It combines HRV-based resilience scoring with short cognitive exercises.

SIGN-IN CREDENTIALS (for the enterprise flow)

User Name: `apple-review@neuroquestzen.pro`

Password: `SQVU453X`

NOTE ON THE PASSWORD FIELD

NeuroQuest enterprise users do not use traditional passwords. The Password value above is the company invite code. On the Wearable screen, enter the email in the Email field and the invite code (SQVU453X) in the Invite Code field, then tap Save & verify. The invite code is a first-party shared secret issued by the employer – it is not third-party social authentication, so Sign in with Apple (Guideline 4.8) does not apply. Credentials are seeded on production; the pilot expires April 2027.

HOW TO TEST THE APP

1) INDIVIDUAL FLOW (no credentials needed) – Launch the app and complete onboarding without entering an invite code. You land on the Free Tier with full access to the Home

dashboard, Neural Energy tracking, Morning Bloom gratitude ritual, and Empathy Index. Tapping any locked brain-training game (Neural Challenge, Mind-Reader, EQ, Pattern Pulse) opens the Zen Pro paywall via Apple StoreKit. The Shop tab also offers IAP for Zen Pro Monthly, Daily Pass, and Extra Spins consumables. Sandbox accounts work as expected.

2) ENTERPRISE FLOW – Use the credentials above on the Wearable screen. Enterprise users bypass the paywall entirely; all training games unlock, and the Resilience tab shows aggregated company data when 5+ teammates participate.

3) APPLE HEALTH SYNC (Wearable screen, from Profile or Resilience) – After saving credentials, tap Connect Apple Health and grant permissions for HRV, Sleep, and Steps. Tap Sync now.

NOTE ON HEALTHKIT TESTING

A real Neuro Resilience Score requires an Apple Watch with recorded HRV, Sleep, and Step data. The review device may have no recorded data, in which case the app shows "No health data found" with an Open Settings option – this is the documented graceful path. If permission is denied, every tab remains fully usable; HealthKit is optional, not required.

HEALTHKIT DATA USAGE

Read-only: Heart Rate Variability (SDNN), Sleep Analysis, Step Count. Never written back to Apple Health. Sent over HTTPS, encrypted at rest, used only to compute the user's Neuro Resilience Score. Aggregated for employer dashboards only when 5 or more team members participate (k-anonymity threshold of 5); individual data is never visible to employers. Full details: <https://neuroquestzen.pro/privacy>.

ACCOUNT DELETION

Available in-app under Profile !' Delete Account. Permanently removes the user record, all HealthKit-derived scores, and all session data. Compliant with Guideline 5.1.1(v).

PAYMENT MODEL

Individual users purchase Zen Pro (subscription), Daily Pass (non-consumable), and Extra Spins (consumables) via Apple In-App Purchase (Guideline 3.1.1). Enterprise customers (companies) purchase seats out-of-app via Stripe at \$50/seat/year – a B2B services transaction exempt under Guideline 3.1.3(b). The app contains no buttons, links, or messaging directing individual users to pay outside of IAP.

PRIVACY AND TRACKING

No IDFA, no App Tracking Transparency prompts (we do no tracking), no third-party advertising or analytics SDKs. We do not read Location, Contacts, Photos, Calendar, or Microphone. HealthKit background delivery is disabled; data is read only when the user opens the Wearable screen and taps Sync.

MEDICAL DISCLAIMER

NeuroQuest is a wellness tool, not a medical device. It does not diagnose, treat, cure, or prevent any disease.

4.7 Version Release

Manually release this version

Recommended ' (gives you control to flip the switch when ready)

Automatically release after approval

Skip for first launch

Phased release

Off for v1.0.0 (use for v1.0.1+)

5. Open Questions Before You Submit

These six items need answers from you before the App Store Connect record can be marked Ready for Review:

- ☐ Privacy Policy URL — does <https://neuroquestzen.pro/privacy> exist? If not, we need to publish one that explicitly covers HealthKit. HARD blocker.
- ☐ Support URL — does <https://neuroquestzen.pro/support> exist? If not, we need at minimum a contact page. HARD blocker.
- ☐ Should we create a dedicated apple-review@neuroquestzen.pro test seat (recommended), or use the existing T3M4CNT9 Bead'd code?
- ☐ Does your backend already support a "review demo mode" account that returns a fake score for empty HealthKit reads? If not, ~30 minutes of code to add.
- ☐ Phone number for App Review contact (with country code).
- ☐ Confirm that all Train/Play game content is original (no third-party copyrighted music, characters) — for the Content Rights answer.

6. Items Still to Complete on the Pre-Flight Checklist

- ☐ Item 7: Verify Profile !' Delete Account exists and actually wipes server-side data.
- ☐ Item 8: Audit for deprecated Info.plist warnings.
- ☐ Item 9: Remove the leaking Replit URL from app.json (expo-router origin: "https://replit.com/" !' your production domain).
- ☐ Item 10: Privacy policy URL is live and explicitly covers HealthKit.
- ☐ Item 11: Support URL is live.

7. Submission Strategy Reminder

- Submit to TestFlight first, not directly to the App Store. Run internal testing for 24–48 hours.
- Submit Mon–Wed morning Pacific time. Friday/weekend submissions sit longer.
- Use Manual Release for v1.0.0 so you can flip the launch switch when you're ready.
- Monitor crash-free rate (target >99.5%) in App Store Connect !' Analytics during the first 24 hours after release.
- Have expo eas update ready as a JS-only hotfix path for non-native bugs (no re-review required).

End of workbook. Save this file alongside NeuroQuest_Apple_Review_Playbook.pdf.
